

Air Canada New Distribution Capability

February 22, 2023

Fare Rules Fees and Baggage Data in Shopping Responses

Overview

The NDC AirShopping, OfferPrice and OrderViewRS APIs are enhanced to return additional data regarding baggage allowances and fees in case of cancellation or change, allowing users to make a more informed choice when selecting offers.

The information will be returned in structured XML format, allowing easy parsing. Note the fees returned are informative and represent the additional fee that applies in case of cancellation or change of an order created from the referenced offer.

Seller flow

In AirShoppingRS, the following information will be returned for each offer:

- Checked-in baggage allowance (number, dimensions and weight)
- Carry-on baggage allowance (number, dimensions and weight)

In OfferPriceRS, the following information will be returned for the priced offer:

- Checked-in baggage allowance (number, dimensions and weight)
- Carry-on baggage allowance (number, dimensions and weight)
- Cancellation Fee
- Change Fee

In OrderViewRS, the following information will be returned (baggage allowances were already present) :

- Cancellation Fee
- Change Fee

See the Air Canada NDC API portal for samples and full documentation.

Out of scope

AirShoppingRS will not return the price for additional checked-in baggage. This information will be returned as informative text by OfferPriceRS and OrderViewRS.
